

# Powerline Router

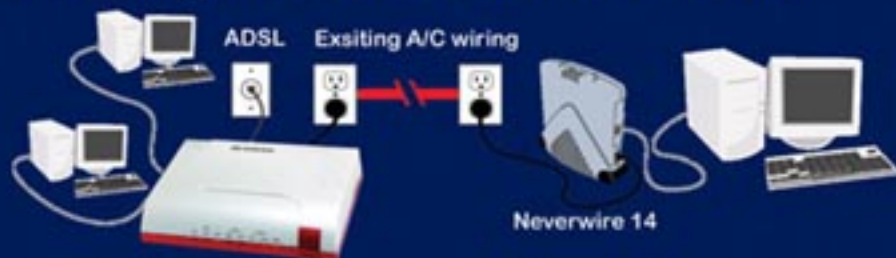

ADSL Integrated Powerline bridge and 3 port  
10/100Mbps switch

*"Deliver broadband internet  
to every room of your building  
within minutes".*

## An ADSL router that turns Power Points into High-Speed Internet outlets!

**No tearing into walls to install cable! - Secure!**

Why buy an ADSL Router that delivers internet into just a single room - our ADSL router turns every power point in your home or office into a high-speed internet access point - without running any cabling! That's right; our ADSL router not only allows you to plug 3 Ethernet devices directly into it but also automatically sets up a network to every power outlet in your building! Every power socket becomes an internet access point and a computer network outlet! All you need to do is plug your computer into one of our Neverwire14 modems (sold separately) ... and...within minutes.....you have a live internet connection.

Three easy steps:

1. Plug the ADSL router into your ADSL connection and the power.
  2. Go to any other room and plug a Neverwire 14 into the closest power socket.
  3. Plug your PC into the Ethernet port on the Neverwire14. You are now online and networked.
- Repeat Steps 2 & 3 for any additional PCs.

**Reach Areas Of Your Building That No Regular Wireless System Can.**
